Footnote

- **Beamer** is a LaTeX document class for creating presentation slides, with a wide range of templates and a set of features for making slideshow effects. It supports pdfLaTeX, LaTeX + dvips, LuaLaTeX and XeLaTeX. The name is taken from the German word “Beamer” as a pseudo-anglicism for “video projector”. [1]

Theorem

Theorem

$\mathbf{X}^T\mathbf{X}$ *is invertible* $\iff$ $\mathbf{X}$ *has linearly independent columns.*

Theorem

$\mathbf{X}^T\mathbf{X}$ is invertible $\iff$ $\mathbf{X}$ has linearly independent columns.

Proof.

Firstly, note that $\mathbf{X}^T\mathbf{X} \in \mathbf{R}^{n\times n}$. We denote $N(\mathbf{X})$ as the kernel (nullspace) of $\mathbf{X}$, and $R(\mathbf{X})$ as the range (column space) of $\mathbf{X}$.
We prove $\mathbf{X}^T\mathbf{X}$ and $\mathbf{X}$ share the same kernel such that once $N(\mathbf{X}) = 0$, $N(\mathbf{X}^T\mathbf{X}) = 0$ and vice versa. $\square$

Proof

Proof.

1) Prove $N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$

$\forall v \in N(\mathbf{X})$, $\mathbf{X}^T\mathbf{X}v = \mathbf{X}^T 0 = 0$

$\implies v \in N(\mathbf{X}^T\mathbf{X}) \implies N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$.

Proof.

1) Prove $N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$
$\forall v \in N(\mathbf{X})$, $\mathbf{X}^T\mathbf{X}v = \mathbf{X}^T 0 = 0$
$\implies v \in N(\mathbf{X}^T\mathbf{X}) \implies N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$.

2) Prove $N(\mathbf{X}^T\mathbf{X}) \subset N(\mathbf{X})$
$\forall v \neq 0 \in N(\mathbf{X}^T\mathbf{X})$, $\mathbf{X}^T\mathbf{X}v = 0 \implies v \in N(\mathbf{X}^T)$ or $\mathbf{X}v \in N(\mathbf{X}^T)$.
However, we have $R(\mathbf{X}) \perp N(\mathbf{X}^T)$ and $\mathbf{X}v \in R(\mathbf{X})$,
$\implies \mathbf{X}v \perp N(\mathbf{X}^T) \implies \mathbf{X}v \notin N(\mathbf{X}^T) \implies v \in N(\mathbf{X}^T)$
$\implies N(\mathbf{X}^T\mathbf{X}) \subset N(\mathbf{X})$

Proof

Proof.

1) Prove $N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$
$\forall v \in N(\mathbf{X})$, $\mathbf{X}^T\mathbf{X}v = \mathbf{X}^T 0 = 0$
$\implies v \in N(\mathbf{X}^T\mathbf{X}) \implies N(\mathbf{X}) \subset N(\mathbf{X}^T\mathbf{X})$.

2) Prove $N(\mathbf{X}^T\mathbf{X}) \subset N(\mathbf{X})$
$\forall v \neq 0 \in N(\mathbf{X}^T\mathbf{X})$, $\mathbf{X}^T\mathbf{X}v = 0 \implies v \in N(\mathbf{X}^T)$ or $\mathbf{X}v \in N(\mathbf{X}^T)$.
However, we have $R(\mathbf{X}) \perp N(\mathbf{X}^T)$ and $\mathbf{X}v \in R(\mathbf{X})$,
$\implies \mathbf{X}v \perp N(\mathbf{X}^T) \implies \mathbf{X}v \notin N(\mathbf{X}^T) \implies v \in N(\mathbf{X}^T)$
$\implies N(\mathbf{X}^T\mathbf{X}) \subset N(\mathbf{X})$

1), 2) $\implies \mathbf{N(X^TX) = N(X)}$ $\square$
